

Pharmaceutical Innovations *for* Pain Management

March 27 - 28, 2019 | Washington, DC

Opioid-based analgesics continue to be the most prescribed pharmaceuticals in the United States, yet carry the highest risk for abuse and overuse. Despite innovations in pain management, non-opioid therapeutics have struggled to gain widespread market adoption among prescribers, clinicians and patients.

Join CBI at the premier forum on pain management, designed to drive pharmaceutical innovations in pain management research and development towards commercial success for the R&D space and towards commercial success. As the market makes room for new and diverse treatment options, make sure your company is well positioned to leverage new approaches to pain. Discuss breakthrough analgesic formulations, successful clinical trial strategies and advantageous regulatory initiatives that will facilitate widespread adoption of tomorrow's pain management solutions.

- Identification of Barriers to Widespread Adoption of Novel Pain Therapeutics
- Target Identification and Validation of Novel Analgesics
- Harm Reduction Through Combination therapy
- Biologic Pain Therapeutics
- SUPPORT Act
- Leveraging Federal Policy to Facilitate Market Adoption of Novel Pain Therapeutics
- Challenges of Clinical Translation of Animal Model Data

Who Should Attend:

You will benefit from attending this event if you have responsibilities or involvement in the following areas:

Chief Executive Officer, Chief Scientific Officers, Chief Medical Officers, Managing Directors, CEO, Head of Department, Principal Research Scientists, Clinical lead, Clinical Operations in the following fields:

Pain and Migraine

Inflammation

Chronic Pain

Neuropathic Pain

Analgesic Pre-Clinical Development

Anesthesia and Pain Management

CNS Clinical Trials

Pharmacology Intelligence

Translational Science

Drug Development

Exploratory Development
